## Systems Neuroscience

Neural systems and neuroanatomy

Professor Daniel Leeds  
dleeds@fordham.edu  
JMH 328A

1

## Levels of organization

Central Nervous System 1m

Systems 10cm

Networks 1mm

Neurons 100µm

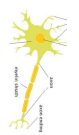

Synapses 1µm

Molecules 1Å

10<sup>11</sup> neurons

10<sup>8</sup> neurons

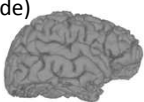

2

## Elements of the central nervous system

- Cerebral cortex ■
- Thalamus ■
- Hypothalamus ■
- Brainstem ■ ■ ■
- Cerebellum ■
- Spinal cord

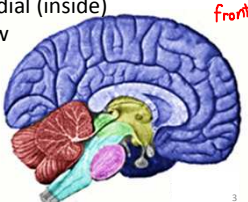

Lateral (side) view

Medial (inside) view

*front*

*back*

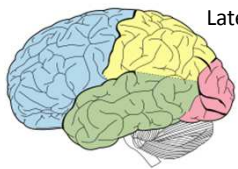

3

## Cerebral cortex broad divisions

- Four lobes
  - Frontal ■
  - Parietal ■
  - Temporal ■
  - Occipital ■
- Two hemispheres: left and right, linked by corpus callosum

Lateral view

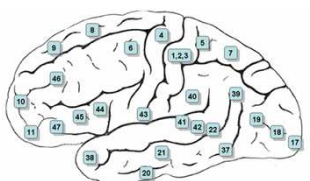

Dorsal (top) view

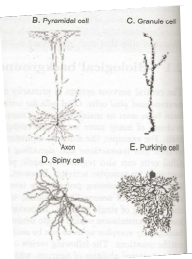

left      right

## Brodmann areas

- Divide brain based on arrangement of neurons in each region

Lateral view

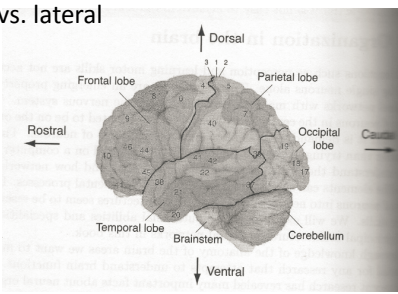

Common neuron types

5

## Navigating the cerebral cortex

- Dorsal (top) vs. ventral (bottom)
- Anterior/rostral (front) vs. posterior/caudal (back)
- Medial vs. lateral

6

### Dividing the cerebral cortex surface

- *sulcus (singular)*  
Sulci – folds  
*also "fissures"*
- *gyrus*  
Gyri – bulges

7

### Functional divisions

- Frontal
  - Future planning, personality, judgment, social behavior
  - Motor cortex
- Temporal
  - Auditory cortex
  - High-level vision
- Parietal
  - Spatial vision
  - Primary sensory cortex
  - Visual-auditory-spatial sensory integration
- Occipital
  - Primary visual cortex

8

### Limbic system

Medial area of cerebral cortex

- Hippocampus: memory
- Amygdala: emotion
- Cingulate and parahippocampal gyri  
*into emotion transfer emotions*

9

### The brain beyond the neocortex

- Thalamus
- Hypothalamus
- **Brain Stem**
- **Cerebellum**

Creative Commons, some right reserved  
[http://en.wikipedia.org/wiki/File:1806\\_The\\_Hypothalamus-Pituitary\\_Complex.jpg](http://en.wikipedia.org/wiki/File:1806_The_Hypothalamus-Pituitary_Complex.jpg)

10

### The brain beyond the neocortex

- Thalamus
  - All sensory information (except olfaction/smell) passes through
- Hypothalamus
  - Emotions, memory
  - Homeostasis: temperature, sleep/alertness, hunger
- Brain Stem
  - Conduit for spinal cord and cranial nerves
  - Respiratory and cardiac activity
- Cerebellum
  - Plan, coordinate, modify motor activities

11

### Two dimensional slices of the brain

- Axial (parallel with ground)
- Coronal (halo)
- Sagittal (in profile)

### Grey and white matter

- Grey matter – soma, performs “computations”
- White matter (60% of brain) – axons, transmits information
- Tractography finds links between brain regions

Creative Commons, some right reserved  
<http://en.wikipedia.org/wiki/File:3DSlicer-KubickiUPR2007-fig6.jpg>

13

### fMRI activity

```
-->loadmatfile('S1_data.mat')
-->size(BrainMtx)
ans =
    48. 48. 27.
-->exec('disp2d.sci')
-->figure;disp2d(BrainMtx(24, :, :), %F);
```

Measuring concentration of oxygenated blood

High firing -> high blood concentration

14

### At the periphery

- Spinal cord
  - Muscles: motor
  - Mechanoreceptors: touch
- Sensory organs
  - Ears: Hearing and balance
  - Eyes: Vision
  - Olfactory bulb: smell

15

### Cortical division review

- Frontal
  - Future planning, personality, judgment, social behavior
  - Motor cortex
- Temporal
  - Auditory cortex
  - High-level vision
- Parietal
  - Spatial vision
  - Primary sensory cortex
  - Visual-auditory-spatial sensory integration
- Occipital
  - Primary visual cortex

16

### Non-functional anatomy

- Vessels of the brain
- Ventricles with cerebrospinal fluid
- Casing around the brain – pia matter, dura matter

Coronal

17

### Cortical processing networks

Perception “hierarchy”

- *Primary sensory areas* capture basic sensory properties, or “features”
- More complex representations in higher sensory areas
- Example: Vision
  - Primary visual cortex in occipital pole
  - Anterior flow of information in ventral (“what”) and dorsal (“where”) pathways

Creative Commons, some rights reserved  
[http://en.wikipedia.org/wiki/File:Ventral-dorsal\\_streams.svg](http://en.wikipedia.org/wiki/File:Ventral-dorsal_streams.svg)

18

### Cortical processing networks

Action

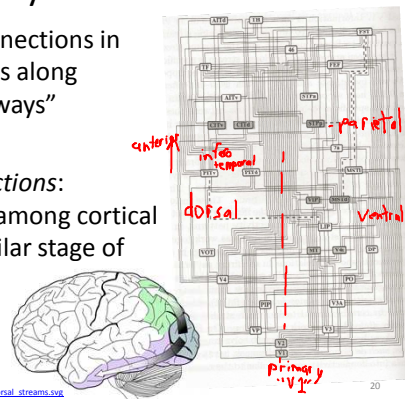

- Motor planning and performance is achieved in stages within the frontal lobe
- Motor correction is supervised by the cerebellum

Creative Commons, some rights reserved  
[http://en.wikipedia.org/wiki/File:Ventral-dorsal\\_streams.svg](http://en.wikipedia.org/wiki/File:Ventral-dorsal_streams.svg) 19

### Complexity of cortical networks

- **Feedback:** connections in both directions along cortical "pathways"
- **Lateral connections:** collaboration among cortical regions at similar stage of processing

Creative Commons, some rights reserved  
[http://en.wikipedia.org/wiki/File:Ventral-dorsal\\_streams.svg](http://en.wikipedia.org/wiki/File:Ventral-dorsal_streams.svg) 20

### Rapid data transmission in the brain

Psychology/computational theory

- Recognizing object category in 400ms (Thorpe)

Biology/implementation

- Multi-stage processing
- Rapid spike transmission

Spike velocity on myelinated axon	120 m/s
Synaptic transmission velocity	0.6 ms
Spike duration	1 ms
Axon length	5 – 1000 mm

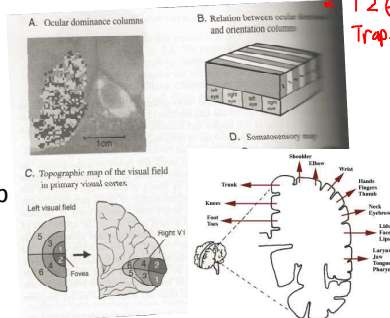

21

### Cortical modules

Groups/"columns" of neurons encoding same property

Subdivisions within cortical region

- Retinotopy
- Body part map *Homunculus*
- Tonotopy

Walter Crane, <http://www.csuchico.edu/~gmcclaffrey/syllabi/CMSD%20320/362unit4.html> 22

### Cortical modules

Groups/"columns" of neurons encoding same property

Subdivisions within cortical region

- Retinotopy
- Body part map *Homunculus*
- Tonotopy

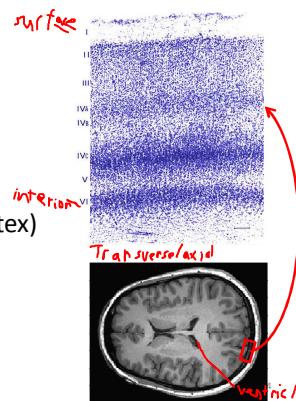

<http://www.ncbi.nlm.nih.gov/books/NBK10946/>

23

### Local cortical structure

Six cortical layers

- Layers contain different neuron types - 6 layers
- Nissl staining shows concentration of somas (here, primary visual cortex)

## Local cortical structure

Six cortical layers

- Layer I contain white matter
- Layer IV for input
- Layer V for output
- Layers II & III for lateral connections

Modeling connections

- White: excitatory
- Black: inhibitory

*fn always →*
